MATTHEW’S FRIENDS STATEMENT

KETOGENIC DIETARY THERAPIES AND PREGNANCY

Further to the recent publicity around the problems associated with the use of some Anti-Epileptic Drugs (AED’s) during pregnancy, there has been a dramatic increase in interest and requests for using Ketogenic Dietary Therapy (KDT) as an alternative treatment to AED’s for those women with epilepsy who are pregnant or whom are trying to get pregnant.

There is currently insufficient medical data to either promote or discourage the use of these dietary therapies during pregnancy. The risks of metabolic ketosis to the fetus and while breast feeding are unknown. The only known publication is a small case series of 2 women which can be found at the following link: https://www.ncbi.nlm.nih.gov/pubmed/28110175

MORE STUDY IS NEEDED FOR THIS IMPORTANT TOPIC.

Ketogenic Dietary Therapies have side effects, so we do NOT advocate their use without strict medical supervision, this is especially crucial during pregnancy.

Please discuss all options with your medical specialists BEFORE embarking on any new dietary regimen or making any changes to your current treatment.

This statement has been agreed and published by the Matthew’s Friends UK Medical Board and Overseas Medical Advisors comprising of:

Professor Helen Cross OBE – UK
Associate Professor Mackenzie Cervenka – USA
Professor Eric Kossoff – USA
Professor Joerg Klepper – Germany
Dr. Manny Bagary UK
Dr. Anita Devlin – UK
Dr. Archana Desurkar – UK
Elles Van der Louw RD – Netherlands
Dr. Elizabeth Neal – UK
Susan Wood RD – UK
Judith Munn RD – UK
